Complimentary refreshments

What is the meaning of "live" in today's virtual world?

LIVE features nine artists who sample and transform data, photographs and video from the Internet and incorporate it into their sculptures and installations. By extracting live footage or transmitting data in real time, they cull from diverse sources a critique of consumerism. Using sources such as C-Span, websites with Iraqi war casualties, social networking sites and on-line video surveillance, they produce thought-provoking, aesthetic and "live" works of art.
